

Let's Grow Daffodils!

“Let's Grow Daffodils!” is a slide program, and what is furnished to you on the accompanying CD (compact disc) is a computer based version of the slide program. There are four files on the disc. The file named “Grow_Daffs_Presentation.pdf” is a portable document format (PDF) file of 50 pages or slides. In a traditional slide program you read a script and advance the slides in a projector as appropriate. The second PDF file on the disc is the script and is named “Grow_Daffs_Script.pdf”. It is 9 pages long. The numbers in the script match the slide or page numbers in the slide presentation. The third PDF file is these notes. The fourth PDF file is “adsmembershipform.pdf” that you can print and make available to the audience should anyone wish to join the American Daffodil Society. The program itself ends at slide number 42. The remaining 8 slides have additional material that you may use depending on the questions from the audience. Please review the script before reading it to an audience.

PDF files can be viewed on just about any computer and will look the same regardless of computer. PDF files also can be displayed without having to buy a special application. Apple Macintosh computers already come with an application named Preview that can view and print PDF files. Just double click on the files; no additional applications are needed, though you can download and install the free Adobe Reader for Macintosh if you wish. Users running Windows must install the free Adobe Reader. Many PC applications come with the user manual as a PDF file and with the Adobe Reader on the installation disc. Often manufacturers of desktop and laptop PC systems will pre-install the Adobe Reader along with Windows. If you do not have Reader, you can go to the Adobe web site and download Reader for free. There are also free versions of Reader for other UNIX operating systems. (There is a UNIX system underlying Mac OS X.)

Under Adobe Reader, the slide show will ask to display in full screen mode. Allow it to do so. Use the arrow keys to advance or back up. Hit the Escape key to bring up the menu bar; this will put the slide in a window and allow you to choose other commands from the menu bar. If you use Preview on a Macintosh, the presentation opens with a menu bar and the slide in a window. To display slides in full screen mode, go to the View menu and pull down to the Slideshow option. Then click on the icon that looks like a rectangle with four arrows at the corners to stretch the image to full screen. Clicking on the X icon or hitting the Escape key will take you back to the menu bar with the slide in a window.

You may copy the PDF files onto your hard drive and print the script or notes for your convenience in making presentations. Please remember that the American Daffodil Society owns the copyright on the script and that the individual photographers own the copyrights in their images. As an individual, a garden club, or local daffodil society, you may make backup copies and add this CD to your library for repeat presentations, but you do not have the right, without the permission of the copyright owners, to duplicate and distribute these files or parts of these files to others.
